Business Requirement

Your organization has hired few employees for database management. However, being new to the organization they should have restricted privileges. For the testing of data, they should be granted with limited memory access. As a database administrator, you should create new users and grant them the required privileges. You are also responsible for capping a collection to avoid extra memory utilization.

Key Issues

- You are responsible for creating new users in MongoDB Database
- You must cap the collections to avoid extra memory utilization

Approach to Solve

- Create new users from User Management tab using Nosqlclient application
- Create a collection and cap it
