Business Requirement

Your organization is shifting from on-premise database to cloud having numerous benefits such as pay only for required size and time, easy database maintenance, and so on. As the Database Administrator, you are asked to explore the MongoDB Atlas and perform various task in in the Cloud Products of MongoDB.

Key Issues

- Shift data from MongoDB on-premise database to MongoDB Cloud
- Manage Security in MongoDB Atlas to secure your database

Approach to Solve

- Create a Cluster in MongoDB Atlas
- Create a Project and create users and team of the Project
- Configure the Security settings of the project
- Create an application using Stitch application and insert documents in it using mongodb command prompt
