Business Requirement

As a data administrator, you should be aware of various methods to connect and manage data in MongoDB database. In certain situation, you should be able to manage the documents of a collection using a REST or HTTP service.

Key Issues

- Developers of your organization have created an API application
- You are responsible for loading that application data to MongoDB using POSTMAN application

Approach to Solve

- Install the provided application in your system
- Install POSTMAN Client from Google Chrome to access your MongoDB Database
- Perform GET, POST, and DELETE operations using POSTMAN
